Medartis Inc. Announces Full Commercial Launch of LapiPrep® Lapidus Correction and Preparation System

Warsaw, IN, March 31, 2023- Medartis, a specialized orthopedic company for upper and lower extremity surgery, today announced the full commercial launch of its LapiPrep Lapidus Correction and Preparation System to the U.S. market.

The LapiPrep system, which has been in limited launch since Q3 of last year, allows surgeons to continuously adjust all three planes of deformity (IM angle, frontal plane rotation, sagittal alignment) while providing compression/distraction. Correction is held in place by stable screws within the dorsal jig, allowing the procedure to be performed with only one set of hands.

Initial results have been favorable, according to surgeons participating in the limited launch. Brett D. Sachs, DPM, FACFAS, Wheat Ridge, CO, shared his impressions of the system.

“The LapiPrep System provides consistent multiplane correction with built-in compression and distraction capabilities,” said Dr. Sachs. “The ability to prepare, compress and ultimately fixate the joint in a variety of ways provides a considerable amount of intraoperative flexibility.”

Rod Mayer, President, Medartis US stated, “The LapiPrep System represents years of dedication to the goal of transforming Lapidus procedures into efficient, streamlined surgeries with precise, reproducible corrections. We look forward to offering surgeons increased intraoperative flexibility and the autonomy to determine the fixation that best meets the needs of their individual patients.”

Medartis Inc., a fully owned subsidiary of Medartis AG, is the legal manufacturer of the LapiPrep Preparation and Correction System. To learn more about the LapiPrep system, visit www.lapiprep.com.
